

Coffee

Visvesvaraya Trade Promotion Centre (VTPC)

VTPC Building, Kasturba Road, Bengaluru-560001

Preface

With a robust agro potential the Country has, the Government of India has launched the One District One Focus Product Scheme (ODOFP) for agriculture sector by the Ministry of Food Processing Industries. Among its primary objectives, the ODOFP initiative aims to enhance the value of the products which is eventually expected to boost employment and income levels of the farmers. The identified products across the country is available at <https://www.nfsm.gov.in/odopstatecropsreport.aspx>

Karnataka has identified its product mix with high demand and export potential across all the districts. The implementing agency for this initiative is the Karnataka State Agricultural Produce Processing and Export Corporation Limited (KAPPEC), the nodal agency in the State.

VTPC being the nodal agency for promotion of exports from the State has made an attempt to draw the action plan district wise, to capture the potential, present status and future prospects in domestic and international markets. Besides, detailed insights have been provided into the biological description of the product, their local, national and international varieties, export-import analysis, HS codes. For a holistic perspective for those concerned, each report also provides SPS standards, processing technologies available, export grading and packing specifications, and suggested pivotal roles and responsibilities among the government departments, boards, corporations and Universities.

Presenting the Action Plan/Report for Coffee, an ODOFP product mapped to Kodagu district of Karnataka, formulated by VTPC. I sincerely hope that this ready reckoner with first-hand information regarding the farming sector would help all those concerned, especially the FPOs and food processing entrepreneurs who have a desire to focus on exporting this product.

Introduction

Coffee, (genus *Coffea*), genus of about 125 species of flowering plants of the family Rubiaceae, is mostly native to tropical Africa. *Coffea arabica* and *Coffea robusta* are the two species that are of major economic importance.

Members of the genus *Coffea* are evergreen shrubs or small trees and often inhabit the understory of tropical forests. The elliptical waxy leaves are borne oppositely along the stems and often feature prominent venation. Many species have a characteristic growth habit in which the upright trunks branch horizontally and may then repeat the pattern on secondary and tertiary branches. The small fragrant white or pink flowers frequently open after a dry period and may last only a few days. The fruit, known as a “coffee cherry,” is a one- or two-seeded drupe and can be red, purple, yellow, orange, blue, or black when mature, depending on the species. The “coffee beans” are rounded oblong seeds, each with a flat face marked by a lengthwise groove.

Two members of the genus, *Coffea arabica* and *Coffea canephora*, supply almost all the world’s coffee consumption. Arabica produces a flatter and more elongated bean that, when brewed, is considered milder and more flavourful and aromatic than Robusta, the main variety of *C. canephora*. Arabica is more widespread in cultivation than Robusta but more delicate and vulnerable to pests, requiring a cool subtropical climate; it must grow at higher elevations of 600–2,000 metres (2,000–6,500 feet) and requires a lot of moisture and has fairly specific shade requirements. Latin America, Eastern Africa, Asia, and Arabia are leading producers of Arabica coffee.

Coffea robusta: The rounder, more convex Robusta bean, as its name suggests, is hardier and can grow at lower altitudes (from sea level to 600 metres). Robusta coffee is cheaper to produce, has twice the caffeine content of Arabica, and is typically the bean of choice for inexpensive commercial coffee brands. Western and Central Africa, Southeast Asia, and Brazil are major producers of Robusta coffee.

Two other species *C. liberica* and *C. eugenoides* are of limited commercial importance as a source of coffee. Sometimes considered more flavourful than Robusta, the large-seeded *C. liberica* is limited in its cultivation because it is very susceptible to plant diseases such as fusarium wilt and coffee rust. Another plant, *C. eugenoides*, is cultivated on a very small scale for speciality “wild” coffee with low caffeine content.

Coffee production in India is dominated in the hill tracts of South Indian states, with Karnataka accounting for 71% (Kodagu alone produces 33% of India's coffee), followed by Kerala with 21% and Tamil Nadu (5% of overall production with 8,200 tonnes). Indian coffee is said to be the finest coffee grown in the shade rather than in direct sunlight anywhere in the world. There are about 250,000 coffee growers in the country; 98% of them are small growers. Almost 80% of Indian coffee is exported; 70% is bound for Germany, Russia, Spain, Belgium, Slovenia, United States, United Kingdom, Japan, Greece, Netherlands and France. Italy accounts for 29% of the exports. Most of the export is shipped through the Suez Canal.

Coffee is grown in three regions of India with Karnataka, Kerala and Tamil Nadu forming the traditional coffee-growing region, followed by the new areas developed in the non-traditional areas of Andhra Pradesh and Odisha on the eastern coast of the country and with a third region comprising the states of Assam, Manipur, Meghalaya, Mizoram, Tripura, Nagaland and Arunachal Pradesh of Northeastern India, popularly known as "Seven Sister States of India".

Karnataka prides to be the Geographical Indications (GI) Coffee Hub of India, with five coffee varieties registered as GI tags by the Coffee Board. These include Monsooned Malabar Arabica Coffee, Monsooned Malabar Robusta Coffee, Bababudangiris Arabica Coffee, Chikkamagalur Arabica Coffee and Coorg Arabica Coffee.

Indian coffee, grown mostly in southern states under monsoon rainfall conditions, is also termed "Indian monsooned coffee". Its flavour is defined as: "The best Indian coffee reaches the flavour characteristics of Pacific coffees, but at its worst, it is simply bland and uninspiring". The two well-known species of coffee grown are the Arabica and Robusta. The first variety that was introduced in the Baba Budan Giri hill ranges of Karnataka in the 17th century was marketed over the years under the brand names - Kent and S.795.

Growing conditions of Coffee & Factors affecting them

Factors	Arabica	Robusta
Soils	Deep, Fertile, rich in organic matter, well- drained and slightly acidic (Ph 6.0-6.5)	Same as Arabica
Slopes	Gentle to moderate slopes	Gentle slopes to fairly level fields
Elevation	1000-1500 m	500-1000 m
Aspect	Nort, East and North-east aspects	Same as Arabica
Temperature	150 -250 degree C ; cool equable	200-300 degree C ; hot, humid
Relative Humidity	70-80%	80-90%
Annual Rainfall	1600-2500 mm	1000-2000 mm
Blossom showers	March- April (25-40 mm)	February- March (25-40 mm)
Backing showers	April- May (50-75 mm) well distributed	March- April (50-75 mm) well distributed

Some popular varieties of coffee in India

Four popular varieties of Arabica coffee are Kents Coffee, S.795 Coffee, Cauvery Coffee, and Sln.9 (Selection 9) Coffee. Two popular varieties of Robusta coffee are S.274 Coffee and CxR Coffee.

1. **Kents Coffee:** Kents – the earliest variety of Arabica coffee – was selected by an English planter with the same name during the 1920s. It remained popular with farmers until the 1940s due to the lower susceptibility of this particular coffee plant to rust. Although it is currently grown in a few areas only, Kents coffee is known for its exceptional cup quality.

2. **S.795 Coffee:** The most popular variety of Arabica coffee in India, S.795, was launched in the 1940s, and known for its superior quality, high yields, bold beans, and better relative tolerance to leaf rust. The S.795 coffee plant was developed using the Kents Arabica coffee plant, known for its top quality. A widely cultivated Arabica variety, it has a balanced cup with the subtle flavour notes of Mocha coffee.

3. **Cauvery Coffee:** Also known as Catimor, the Cauvery coffee plant is a hybrid descendent of Caturra (a natural mutant of the high-quality Bourbon variety) and Hybrido-de-Timor. The Cauvery coffee plant inherited the superior quality attributes of Caturra and the fierce resistance of Hybrido-de-Timor.

4. **Sln.9 Coffee (Selection 9 Coffee):** The Selection 9 coffee plant is a hybrid between Tafari-kela (an Ethiopian Arabica collection) and the sturdy and resistant Hybrido-de-Timor. It boasted of all the superior cup quality traits of Tafari-kela. It won the Fine Cup Award for best Arabica at the Flavour of India – Cupping Competition 2002 organized by Indian Coffee Board.

Valuable Coffee Varieties – By Region

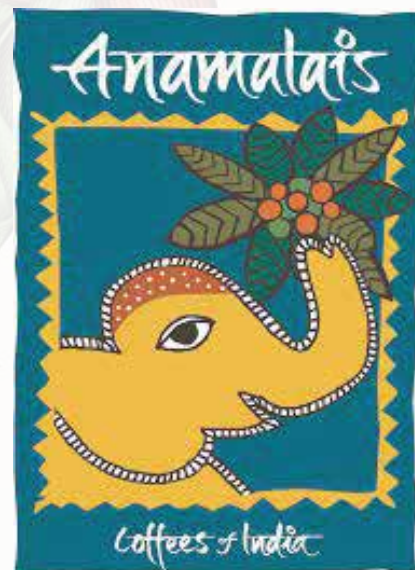

Major C. arabica coffee-producing regions include Anamalais, Araku Valley, Bababudangiris, Biligiris, Brahmaputra, Shevaroy, and Pulleys.

Major C. robusta coffee-producing regions include Wayanaad (the largest producer of Robusta) and Travancore. Coorg, Chikkamagalur, Nilgiris, and Manjarabad are famous for both the Arabica and Robusta varieties.

1. Coffee from Anamalais (Tamil Nadu)

- Elevation: 1000-1400 m MSL
- Rainfall: 2500-3000 mm
- Main coffee type: Arabica
- The total area under Coffee: 2,500 ha
- Average production: 1,500 MT
- Main varieties: S.795, Cauvery, Sln.9
- Main intercrops: Pepper, Orange, Banana

The Anamalais region is a medium-altitude mountain range on the southern tip of the Western Ghats that experiences high rainfall and known for its wildlife sanctuaries, with spotted leopards and elephants. The plantations are home to high-grown Arabicas, including the exotic Kents. The Arabicas here are finely grown broad types of coffee beans that are greyish green in color and tend to be more balanced with a strong aroma coupled with citrus essence.

2. Coffee from Araku Valley (Andhra Pradesh) – (GI) Tag

- Elevation: 900-1100 m MSL
- Rainfall: 1000-1200 mm
- Main Indian coffee type: Arabica
- The total area under Coffee: 20,000 ha
- Average production: 3,100 MT
- Main varieties: S.795, Sln.4, San.5, Cauvery
- Main intercrops: Pepper, Mango, Jackfruit, Vegetables

Home to colourful parrots, the Araku Valley is situated in the Eastern Ghats of northern Andhra Pradesh and southern Orissa.

The development of coffee plantations here is more recent. It has been a boon to the tribal populations here since it has provided them with a viable alternative to their traditional methods of shifting cultivation. Indian Coffee from Araku Valley is characterized by a medium body, medium to sharp acidity, and intense aroma with spicy notes.

3. Coffee from the Brahmaputra Region

- Elevation: 800-1200 m MSL
- Rainfall: 1500-2000 mm
- Main coffee type: Arabica
- The total area under Coffee: 5,000 ha
- Average production: 300 MT
- Main varieties: S.795, Cauvery
- Main intercrops: Pineapple, Pepper, Jackfruit, Vegetables.

Indian Coffee is grown in all the eight states of Northeast – Assam, Arunachal Pradesh, Mizoram, Meghalaya, Manipur, Tripura, Sikkim, and Nagaland. The Brahmaputra River that flows across Assam and Arunachal Pradesh – is the lifeline of this region, which is home to the mighty one-horned rhinoceros found in Kaziranga National Park. Although current production levels are relatively low, the Arabica coffee from this region is unique with a medium to full body, a uniquely fruity essence, mild degrees of acidity, and a pleasant aroma.

4. Coffee from Nilgiris (Tamil Nadu)

- Elevation: 900-1400 m MSL
- Rainfall: 1600-2600 mm
- Main coffee types: Arabica, Robusta
- The total area under Coffee: Arabica - 3,600 ha,
Robusta - 4,000 ha
- Average production: Arabica - 1,400 MT, Robusta - 2,800 MT
- Main varieties: Arabica - S.795, Kents, Cauvery
Robusta - Peridenia, S.274, CxR
- Main intercrops: Pepper, Orange, Banana, Ginger, Vegetables
- Major wildlife presence: Spotted leopards

Nilgiris, or the Blue Mountains, are situated on the Western Ghats and have elevations ranging from 5000 feet to 8800 feet. Besides its wildlife sanctuaries that host the spotted leopard, the region is known for some of the best Kents Arabica (as well as high-quality teas). The coffee beans are bold and bluish-green and ripen slowly in the mild climate. Nilgiri coffee has a full body, sharp acidity, beautiful aroma, and sweet flavor.

5. Coffee from Pulneys (Tamil Nadu)

- Elevation: 600-2000 m MSL
- Rainfall: 1000-1600 mm
- Main coffee type: Arabica
- The total area under Coffee: 14,000 ha
- Average production: 7,500 MT
- Main varieties: S.795, San.5B, Sln.9, Sln.10, Cauvery
- Main intercrops: Orange, Banana, Pepper, Cardamom, Vegetables

The Pulleys hill range is situated adjacent to the popular Kodaikanal hill resort on the southernmost tip of the Western Ghats. Among the unique features of this hill, the field is the bluebell-like Kurinji flower that is visible only once in 12 years. Some of the best Arabicas are grown here like S.795, Sln.10, and Cauvery. These coffees have a medium body, medium-plus acidity, and a slight flavor coupled with a citrus aroma.

6. Coffee from Sheveroy (Tamil Nadu)

- Elevation: 900-1500 m MSL
- Rainfall: 800-1500 mm
- Main coffee type: Arabica
- The total area under Coffee: 5,000 ha
- Average production: 3,000 MT
- Main varieties: S.795, Cauvery, Sln.9
- Main intercrops: Orange, Banana, and Pepper.

The Sheveroy region has abundant lakes and tall peaks, where premium Arabica coffees like S.795, Sln.9, and Cauvery are grown at altitudes of up to 5000 feet under silver oaks. The berries mature at a slow rate and acquire a bluish-green color. They produce Coffee with a medium body, good acidity, and slight flavor with a tinge of spice. The lower areas of the hills in the region are frequented by the Gaur or Indian bison.

7. Coffee from Travancore (Kerala)

- Elevation: 400-1600 m MSL
- Rainfall: 2000-4000 mm
- Main coffee type: Robusta
- The total area under Coffee: 13,000 ha
- Average production: 9,000 MT
- Main varieties: S.274, CxR
- Main intercrops: Pepper, Banana, Ginger, Medicinal plants

Travancore is an erstwhile princely state in southern Kerala, where lotus flowers are often found growing in shallow waters. Two separate Indian coffee growing areas are part of the region – Idduki (mostly Robusta) and Nelliampathys (both Arabica and Robusta). The mountains of Idduki are of medium to a high elevation and are also home to numerous plantation crops, spices, and medicinal plants. Nelliampathys, on the other hand, is well known for the CxR variety of robusta coffee. These Robustas have a full body and sweet taste with very little bitterness.

8. Coffee from Wayanad (Kerala) – GI Tag.

- Elevation: 600-900 m MSL
- Rainfall: 1100-1200 mm
- Main coffee type: Robusta
- The total area under Coffee: 67,000 ha
- Average production: 54,000 MT
- Main varieties: Peridenia, S.274, CxR
- Main intercrops: Pepper, Banana, Ginger, Vegetables

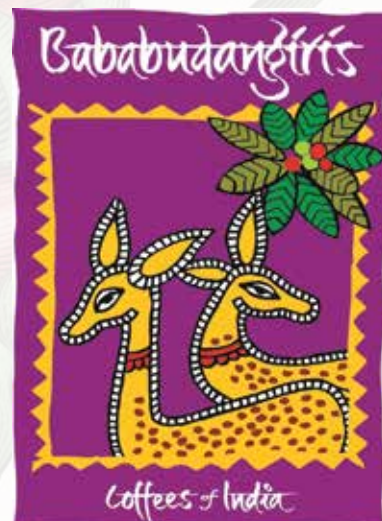

Wayanad in northern Kerala is the largest Robusta producing region in India with medium-altitude, gently sloping hills with fertile laterite soil. A wide variety of plantation crops are grown in the small coffee plantations in this region, including spices and condiments, as well as staple foods like yam. Wayanad coffees are prepared from the washed Arabicas of Chikkamagalur, Coorg, Biligiris, Bababudangiris, and Shevaroyes. The coffee beans are broad, bluish-green in color, and have a clean, polished appearance. The CXR and S.274 Robusta varieties from Wayanad are famous for their soft to neutral essence, full-body, and intense aroma with hints of chocolate.

9. Coffee from Bababudangiris (Karnataka) – GI Tag

- Elevation: 1000-1500 m MSL
- Rainfall: 1750-2200 mm
- Main coffee type: Arabica
- The total area under Coffee: 15,000 ha
- Average production: 10,500 MT
- Main varieties: S.795, Sln.9, Cauvery
- Intercrops: Pepper, Cardamom, Arecanut

The birthplace of Indian Coffee, Bababudangiris, is named in honour of the legendary saint Baba Budan¹ – who brought Coffee to India.

With a peak altitude of 1500 meters, the region is frequented by spotted deer. The coffee plantations here produce full-bodied Arabicas, which ripen at a relatively slower pace due to mild weather conditions. The Indian Coffee from these carefully selected beans, which are processed through natural fermentation, has a full-body, acidity, sweet flavor, and unmistakable aroma with a hint of chocolate.

10. Coffee from Biligiris (Karnataka/Tamil Nadu)

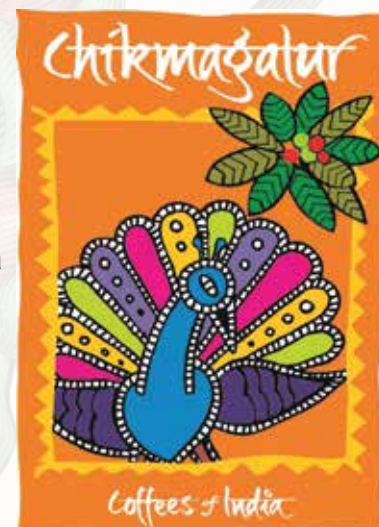

- Elevation: 1500-2000 m MSL
- Rainfall: 1100-1200 mm
- Main coffee type: Arabica
- The total area under Coffee: 800 ha
- Average production: 700-800 MT
- Main varieties: S.795, Sln.9, Cauvery
- Main intercrops: Orange, Banana, Pepper
- Major wildlife presence: Sambar

The literal meaning of Biligiris is white hills, and these hills in south-eastern Karnataka get the name because their peaks are covered with silver clouds and white mist for most of the year. They are among the highest altitude coffee growing regions in India, and the most popular variety coming from this region is the high elevation S.795 Arabica. The Indian Coffee ripens slowly under a mild shade of silver oaks and fruit trees and has a full-body, lovely aroma and a unique sweet flavour.

11. Coffee from Chikmagalur (Karnataka) – GI Tag

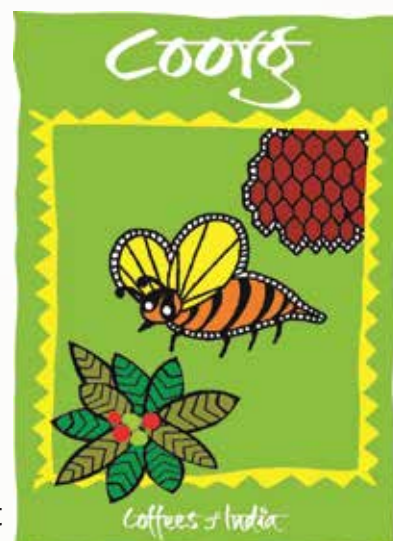

- Elevation: 700-1200 m MSL
- Rainfall: 1000-4500 mm
- Main coffee types: Arabica, Robusta
- Total area under coffee: Arabica - 37,000 ha, Robusta-23,000 ha
- Average production: Arabica - 29,000 MT, Robusta - 30,000 MT
- Main varieties: Arabica - S.795, San.5B, Sln.9, Cauvery
- Robusta - Peridenia, S.274, CXR
- Main intercrops: Pepper, Cardamom, Arecanut, Orange, Vanilla.

Chikmagalur in Karnataka is especially renowned as a tourist paradise with dense forests and wildlife sanctuaries with (among other species) colorful peacocks – apart from substantial coffee plantations. It is home to the Central Indian Coffee Research Institute and is also called the Coffee Country of India. The Arabica beans from this region produce Indian Coffee that has a medium body coupled with light acidity and flavor, and medium to the intense aroma.

12. Coffee from Coorg (Karnataka) – GI Tag

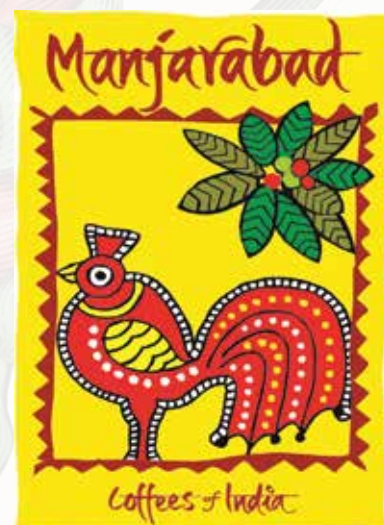

- Elevation: 750-1100 m MSL
- Rainfall: 1000-2500 mm
- Main coffee types: Arabica, Robusta
- Total area under coffee: Arabica - 26,000 ha,
Robusta - 56,000 ha
- Average production: Arabica - 24,000 MT, Robusta - 69,000 MT
- Main varieties: Arabica - S.795, Sln.6, Sln.9,
Cauvery; Robusta - S.274, CxR
- Main intercrops: Pepper, Cardamom, Orange, Banana, Arecanut

Coorg is **India's largest coffee-producing district**. The district, which is also famous for its honey, is the source of the Cauvery river and has a rich history associated with the brave Kodava warriors. The region produces both Arabicas and Robustas. The Arabica coffees from Coorg are lightly acidic with a mild flavor and intense aroma, while the Robusta coffees are soft and neutral, with hues of chocolate.

13. Coffee from Manjarabad (Karnataka)

- Elevation: 900-1100 m MSL
- Rainfall: 1000-2500 mm
- Main coffee types: Arabica, Robusta
- Total area: Arabica - 31,700 ha, Robusta - 9,400 ha
- Average production (MT): Arabica - 21,000, Robusta - 9,500
- Main varieties: Arabica - S.795, Sln.6, Sln.9, Cauvery Robusta - S.274, CxR
- Major wildlife presence: Jungle fowl
- Main intercrops: Pepper, Cardamom, Orange, Arecanut, Banana

Manjarabad is a relatively small geographical Coffee growing area between Chikkamagalur and Coorg, with medium elevation mountains and rainfall ranging from 1000-2500 mm. The region is characterized by gentle sloping terrains and small streams and is home to the jungle fowl. Although it is a small region, the mixed shade Arabicas produced here are among the best, and planters in the area are known for employing innovative technologies. Coffees from Manjarabad have a medium to full body, mild acidity, medium to intense aroma and pleasant flavor.

Speciality Coffees

1. Monsooned Malabar (GI tag):

Centuries ago, when coffee beans were transported to Europe in sailing ships, a 'wonderful' accident occurred. Monsoon winds caused the beans to swell, change colour and acquire an intensely-mellow flavour that won connoisseurs over. Today, this magic is recreated by 'monsooning' the finest Arabica beans to produce a world-famous specialty coffee.

Monsooned coffee or coffee beans 'swollen' with moisture from the air, is prepared at the curing works situated on the West Coast of Southern India. Stored in special warehouses, moist monsoon winds circulate around the coffee beans, making them swell in size and take on a mellowed but aggressive, musty flavour. This process yellows the bean and reduces the acidity, imparting a heavy, syrupy flatness reminiscent of aged coffees.

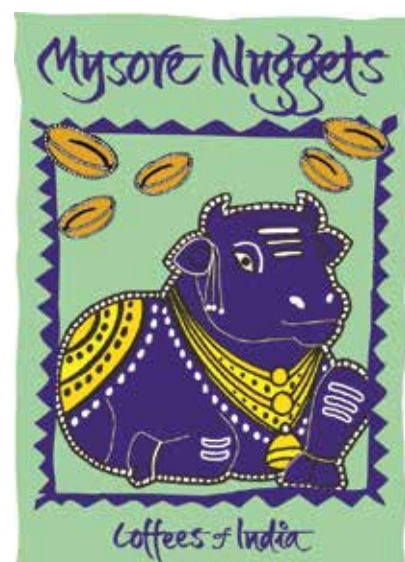

For preparing monsooned coffees only dry processed Arabica and Robusta beans are used. The coffees are mainly used in blends to mellow and impart richness to rougher, more acidic coffees.

2. Mysore Nuggets Extra Bold:

The might and grandeur of the monolithic Nandi bull statue on Chamundi Hills of Mysore, is reflected in these large, exotic Arabica beans that make this rare, premium specialty coffee, a connoisseur's delight.

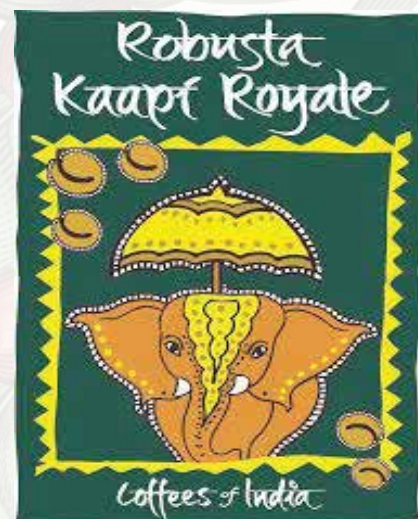

These wonderful and exotic coffees are prepared from washed Arabicas grown in the regions of Chikkamagalur, Coorg, Biligiris, Bababudangiris and Shevaroyes. The beans are very large, uniform bluish-green in colour, with a clean polished appearance. In the cup, the coffee exhibits full aroma, medium to good body, good acidity and fine flavour, with a hint of spice. This is a rare, premium coffee and truly represents the best quality coffee from India.

3. Robusta Kaapi Royale:

The stately elephant with its howdah - a canopied seat bedecked with flowers and jewels used during a ceremonial procession – is a sign of Indian royalty. Much like this king of specialty Indian 'kaapis', prepared from bold Robusta beans of the best quality.

This coffee is prepared from Robusta Parchment AB from the regions of Coorg, Wayanad, Chikkamagalur and Travancore. The beans are bold, round with pointed ends, and grey to bluish-grey in colour. The cup ensures a full-body, soft, smooth and mellow flavour.

Role of Coffee Board of India

<https://www.indiacoffee.org/index.aspx>

The Coffee Board of India is an organization managed by the Ministry of Commerce and Industry of the Government of India to promote coffee production in India. With its Head Office in Bengaluru, the Coffee Board of India was established by an Act of Parliament in 1942. Until 1995 the Coffee Board marketed the coffee of many growers from a pooled supply, but subsequently coffee marketing became a private-sector activity due to the economic liberalization in India.

The Coffee Board's traditional duties included the promotion of sale and consumption of coffee in India and abroad, conducting coffee research, financial assistance to establish small coffee growers, safeguarding working conditions for labourers, and managing the surplus pool of unsold coffee.

"Coffee Board of India - About Us".

Coffee Board & its functions

During the 1940s, the coffee industry in India was in a desperate state due to the II World war resulting in very low prices and ravages of pests and diseases. At this time, the Government of India established the 'Coffee Board' through a constitutional Act "Coffee Act VII of 1942" under the administrative control of the Ministry of Commerce and Industry. The Board comprises 33 members including the Chairman, who is the Chief Executive and appointed by the Government of India. The remaining 32 members represent the various interests such as the coffee growing industry, coffee trade interests, curing establishments, interests of labour and consumers, representatives of governments of the principal coffee-growing states, and Members of Parliament.

Role of Coffee Board

After pooling was discontinued in 1996, Coffee Board serves as the friend, philosopher and guide to the Coffee sector covering the entire value chain. The core activities are primarily directed towards research & development, technology transfer, quality improvement, extending development support to the growing sector, and promotion of coffee in export and domestic markets. The activities of the Board are broadly aimed at

- (i) Enhancement of production, productivity & quality;
- (ii) Export promotion for achieving higher value returns for Indian Coffee and
- (iii) Supporting the development in the Domestic market.

Action Plan

- Coffee board being the nodal agency for coffee has several plans, schemes, training programs and responsibilities to improve the quality and production of coffee.
- Though Karnataka leads in the export of coffee, roasted, decaffeinated and caffeinated the volume of Indian exports at the global level is low. More coffee planters and cultivators can be encouraged to involve themselves in growing the coffee and produce value-added products of coffee to improve exports.
- The principal activity of the Extension Service of the Coffee Board is to transfer new coffee technologies standardized by the research department to the coffee growers for achieving better production/productivity vis-a-vis improving the quality of coffee. Thus, it helps to bridge the gap between coffee planters and research scientists in the implementation of coffee technology in the coffee estates. Around 3.47 lakh hectares cultivated by over 1.64 lakh growers are covered by the extension service in the traditional tracts of Karnataka, Kerala and Tamil Nadu.

Responsibility Matrix

Coffee Board of India under the Ministry of Commerce & Industry, GOI has included all relevant data for coffee planters to educate and facilitate production.

- Training Programme on Coffee Roasting, Brewing & Retailing is conducted under the name 'Kaapi Shastra' for Coffee Roasters, Hotel/Restaurant/Cafeteria personnel, Institutional Caterers and Entrepreneurs interested in coffee retailing- <https://www.indiacoffee.org/kaapi-shastra.html>
- Coffee board website also provides data about international and national events, opportunities for coffee planters throughout the calendar year on their website under media and events tab.
- They also publish news, books and bulletins, market study reports and brochures pertaining to coffee production, value-addition and market scenarios periodically under the publications tab.

No.	Actions	Responsibility
1	Cultivator's database and aggregation of the produce	Coffee Board of India, Ministry of Commerce & Industry, GOI.
2	Inviting Exporters/entrepreneurs to Investors meet for contract farming and processing industries	Coffee Board of India, Ministry of Commerce & Industry, GOI.
3	Post-harvesting technologies, Grading and Processing of Spices	Coffee Board of India, Ministry of Commerce & Industry, GOI.
4	Processing technology and Value Addition Handholding	Coffee Board of India and CFTRI, Mysore
5	Export training, orientation and Market Intelligence	Coffee Board of India and VTTC Karnataka.
