

TOMATO

Visvesvaraya Trade Promotion Centre (VTPC)

VTPC Building, Kasturba Road, Bengaluru-560001

PREFACE

With a robust agro potential the Country has, the Government of India has launched the One District One Focus Product Scheme (ODOFP) for agriculture sector by the Ministry of Food Processing Industries. Among its primary objectives, the ODOFP initiative aims to enhance the value of the products which is eventually expected to boost employment and income levels of the farmers. The identified products across the country is available at <https://www.nfsm.gov.in/odopstatecropsreport.aspx>

Karnataka has identified its product mix with high demand and export potential across all the districts. The implementing agency for this initiative is the Karnataka State Agricultural Produce Processing and Export Corporation Limited (KAPPEC), the nodal agency in the State.

VTPC being the nodal agency for promotion of exports from the State has made an attempt to draw the action plan district wise, to capture the potential, present status and future prospects in domestic and international markets. Besides, detailed insights have been provided into the biological description of the product, their local, national and international varieties, export-import analysis, HS codes. For a holistic perspective for those concerned, each report also provides SPS standards, processing technologies available, export grading and packing specifications, and suggested pivotal roles and responsibilities among the government departments, boards, corporations and Universities.

Presenting the Action Plan/Report for Tomato, a ODOFP product mapped to Kolar and Chikkaballapur districts of Karnataka, formulated by VTPC. I sincerely hope that this ready reckoner with first-hand information regarding the farming sector would help all those concerned, especially the FPOs and food processing entrepreneurs who have a desire to focus on exporting this product.

Tomato Prospects

Introduction

Tomato is the edible berry of the plant *Solanum lycopersicum* commonly known as a tomato plant. The species originated in western South America and Central America. Tomatoes are a significant source of umami flavour. The tomato is consumed in diverse ways, raw or cooked, in many dishes, sauces, salads, and drinks.

Initially, tomato arrived in India by the way of Portuguese explorers, in the 16th century. It was grown from the 18th century onwards by the British. Even today, in Bengal, the alternative name is "Biliti Begun" meaning "Foreign Eggplant". It was then adopted widely as it is well suited to India's climate, with Uttarakhand as one of the main producers.

Popular Tomato varieties across the world

Cherry and grape tomatoes are small

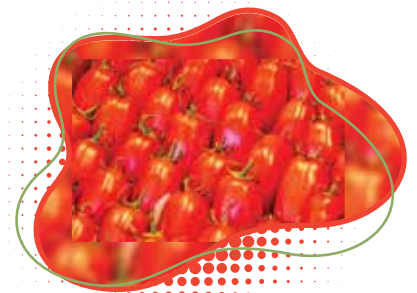

and very easy to grow, first domesticated in Puebla-Veracruz area of Mexico and now grown throughout South America and South-east Asian countries. Hence, are recommended for those who have never before planted tomatoes. They usually don't grow more than one inch in diameter, and they tend to be very resistant to diseases. They can do well even in cases of drought or

otherwise poor soil, and they are perfect for people who have cool or very short summers, which means they even do well in containers.

These types of tomatoes are great for fresh tomato snacking as well as being used as garnishes in salads and the like. They have a much sweeter taste than other tomato types and can be a great way to offset a very tangy tomato sauce.

Roma tomatoes

(sometimes referred to as a plum tomato) are thick and have few seeds, but a lot of pectin. They are a sweeter variety than other types of tomato, and they make the perfect tomato sauce or tomato paste. They also have very little moisture in them, enabling you to store them for a very long time and cooking to the perfect consistency when making pastes or sauces. Roma tomatoes are grown in the United States, Mexico, Australia, and Great Britain.

Big Beef

Tomatoes from America bloom early in the growing season and can get up to 6 inches in diameter, with great flavor and firm texture. Best of all types as they grow well almost anywhere especially in cooler climate. The sheer size of it is shocking when one sees it in a grocery store. Their high moisture content makes it difficult to store. Hence, it's a good idea to save these for a recipe or dish that will require the use of the entire tomato.

Sungold Tomatoes

from Tokita Seed Company, Japan are sweet and orange in color and they grow to approximately one inch in diameter. They are an indeterminate type of tomato that produces for a very long time, usually until the first frost arrives. This is the favourite tomato cultivar of gardeners who live in many different countries, including the UK and America.

Sweet 100 tomatoes

taste yummy and are a type of indeterminate tomato. They grow as bite-sized tomatoes on long trusses, and they produce very large crops throughout the year. As indicated by the name, they are quite sweet in nature with a fair amount of seeds within the fruit. It is a hybrid that was developed by Northrup-King Seed Company, which is now a division of Syngenta. Sweet 100s revolutionized the cherry tomato world with its terrific yields of up to fifty fruits per cluster, and its novel, sweet taste when it was introduced in 1978.

Dwarf Saucy Mary Tomatoes

These fruits are elongated with a green color and stripes of both dark and light green. When ripe, their flesh is also green, and they are very juicy and tasty. They usually weigh no more than six ounces. Many people often think that a green tomato means an unripe tomato, but this isn't always the case. Tomatoes can be many different colors, and even combinations of more than one. The dwarf saucy mary tomato is a great option for making fried green tomatoes which is a classic southern dish.

Developed by the Dwarf Tomato Project. (Kiwi family). Sherry Long created the Kiwi family by crossing Dino Eggs with an F2 selection from the Lazy family in 2012. Craig LeHoullier selected and named Dwarf Saucy Mary for his wife Susan's Aunt Mary Kelly.

Hybrid Varieties of Tomato in India

Hybrid is a cross between the two famous varieties which carries the qualities of both the parent varieties. The plants grown from such hybrid varieties show better quality and resistance towards diseases and climates, with excellent production as well. Here are some of the most common hybrid varieties of tomato in India.

Pusa Rohini was first introduced by Indian Agricultural Research Institute in the year 2005. The fruits of this variety can stay fresh for longer times. They are medium in size and have smooth thick skin, red in color. The average yield of this variety is 412 q/ha.

Pusa Sadabahar Another variety by Indian Agricultural Research Institute, introduced in 2004. The fruits are oval in shape and have a shiny skin with a bright red color. This cultivar produces higher yields of tomatoes.

Pusa Upahar Introduced by IARI in the year 1996 is known for its round shape, medium size and thick pulp. Usually borne in clusters and bear around 3-5 fruits in each cluster. The average yield of this variety is around 370 q/ha.

Arka Shreshtha An introduction from the India Institute of Horticultural Research, Bangalore. Fruits of this cultivar have a larger shelf life. The variety produces an average yield of 700 q/ha, and the weight of the fruits is around 60-70 grams, each.

Arka Vardhan The plants of this cultivar bear flat round fruits that are dark red in color. This variety is resistant to nematodes and was also developed by IIHR, Bangalore.

Arka Vishal With an average yield of 750 q/ha, this variety from IIHR, Bangalore becomes one of the high yielding cultivars. The fruits of this variety are firm and round in shape, with a deep red color. These fruits are resistant to fruit cracking.

Arka Saurabh It is a medium yielding variety of tomatoes, by IIHR, Bangalore. The average per hectare production ranges 380 q. They are firm, round in shape, and have a thick pulp and have a nipple at the apex.

Punjab Chauraha Introduced by Punjab Agricultural University, Ludhiana in 1981. The fruits are pear-shaped, and have very less amount of seeds and are sweeter than the other varieties.

HS-101 variety introduced by HAU, Hissar in the year 1975, is suitable for cultivation in the winter season. The fruits are round and medium in size. These plants bear fruits in clusters of 3-4, each.

Punjab Kesari Punjab Kesari was first developed in 1987. It is an early maturing variety of tomatoes. The fruits are resistant to cracking and offer good shelf life.

Varieties of tomato plants known in Karnataka

Released by IARI Pusa Rohini, Pusa Sadabahar, Pusa Hybrid 8, Pusa Hybrid 4, Pusa Uphar, Pusa Hybrid 2, Sioux

Released by IIHR Arka Vikas, Arka Saurabh, Arka Meghali, Arka Ahuti, Arka Ashish, Arka Abha, Arka Alok, Arka Vishal, Arka Vardan, Arka Shreshta, Arka Abhijit

Released by PAU Pb. Kesari, Punjab Chhuhara, S-12, Sel-152, PAU-2372,

Released by GBPUAT, Pantnagar: Pant T-10, AC-238, Pant T-3

Others: H-24, H-86, Pusa Early Dwarf, CO-3, CO-1, BT-12,

Improved Variety Pusa -120, Pusa Ruby, Pusa Shital, Pusa Early Dwarf, Pusa Gaurav, Arka Ahuti, Arka Saurabh, Arka Vikas, Arka Meghali, HS102, HS101, HS110, Hisar Lalit, Hisar Anmol, Hisar Lalima, Co-1, Co-02, Co-3, S-12, PKM-1, Pant Bahar, Punjab Chhuhara, Pant T3 and Solan Gola.

Hybrids Variety Pusa Hybrid 1, Pusa Hybrid 2, Pusa Hybrid 3, Arka Vishal, Arka Shreshta, Arka Abhijit, Arka Vardan Rashmi, MTH 4, Naveen, Rupali, COTH 1 Hybrid Tomato, Avinash 2, Sonali, Sadabahar and Gulmohar.

Presently grown varieties in Nagamangala and Chikkaballapur

Alankar, 1068, 1057, Yogi Hybrid, and Syngenta – Sahoo var 448.

Other products of tomato known across the world are **canned tomatoes**, **Crushed Italian tomatoes**, **Tomato paste**, **Tomato purée**, **Tomato sauce**, **Passata** and **Sun-dried tomatoes**.

The top 10 tomato exporting countries in the world in 2020

Mexico, the Netherlands, and Spain were the leading exporters of tomatoes in 2020. Mexico's tomato exports amounted to 2.61 billion. It was followed by the Netherlands, with 1.915 billion, and Spain with 1.070 billion. Mexico concentrates practically all of its shipments to the United States. Netherlands mainly exports its tomato to Germany and the United Kingdom, while Spain mainly sends its tomato to Germany, the United Kingdom, and France.

The top 10 tomato exporting countries in 2020 is completed by Morocco (770 million), Canada (460 million), France (440 million), Belgium (330 million), the United States (310 million), Turkey (310 million), and China (270 million).

Country	Export %
Mexico	26.13%
Netherlands	19.23%
Spain	10.72%
Morocco	9.25%
Canada	4.61%
France	4.48%
Belgium	3.23%
Turkey	3.15%
United States	3.14%
China	2.75%

USA Standards All tomatoes except pear-shaped, cherry, hydroponic, and greenhouse, imported into the United States must meet the minimum grade and size requirements prior to importation. Grade and size requirements are in effect from October 10 through June 15 of each year. The cost of the inspection and certification is paid by the applicant. Grade Requirements - All tomatoes must grade at least U.S. No. 2.

Size Requirements - All tomatoes must be at least 2-9/32 inches in diameter.

View the full regulation on

<http://apeda.in/agriexchange/Market%20Profile/one/TOMATO.aspx>

Canadian Inspection The tomato import regulations identify the Canadian Food Inspection Agency (CFIA) as a governmental inspection service for the purpose of certifying the grade, size, quality and maturity of tomatoes imported, or to be imported, into the United States. These import regulations are currently being amended to require Canadian exporters of tomatoes into the United States to enter the CFIA certificate number and an electronic image of the CFIA certificate into CBP's ACE system, which will transmit said certificate number and image to MOAD.

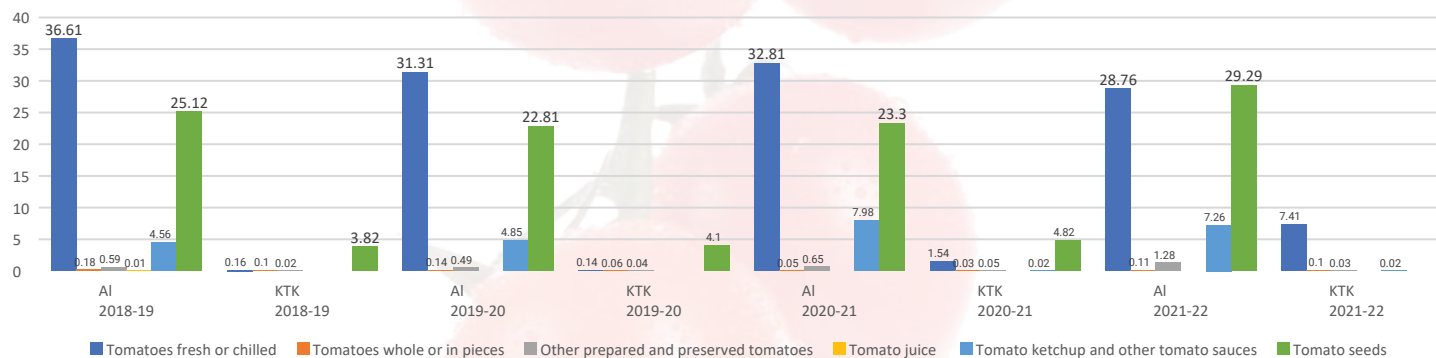

Specific Exemptions Tomato requirements do not apply to any tomatoes with minimum quantities not exceeding 60 lbs per day, or to pear shaped, cherry, hydroponic, and greenhouse tomatoes.

The Importer's Exempt Commodity Form (SC-6) is used for tomatoes for consumption in exempted outlets such as charitable institutions, distribution by relief agencies, canning, and pickling. Contact the Marketing Order and Agreement Division's (MOAD) Compliance and Enforcement Branch for more information on filing the SC-6 exemption certificates within two days after the commodity enters the United States. The SC-6 exemption form must now be filed through the Compliance and Enforcement Management System (CEMS). Tomatoes Failing Inspection: Tomatoes failing to meet the above import requirements may be: (1) exported; (2) disposed of under Federal or Federal-State Inspection Service supervision with the importer bearing the costs of certifying the disposal of such tomatoes; (3) diverted to an exempt outlet using the SC-6 form (see various approved outlets and procedures listed above) or; (4) reconditioned and re-inspected with failed portion disposed under the procedures number (2) or (3) above.

Timeline Tomato importers should make arrangements for inspection and certification at least one day prior to entry at Port inspection offices, two days prior to entry at the Field Operations Section at the Washington Headquarters.

FPO's registered and working on Tomato in Karnataka

1. Anjanadri Horticulture Farmer Producers company Ltd – Hagaribommanahalli.
2. Cheluru Horticulture Farmer Producers company Ltd – Chelur, Chikkaballapur.
3. Holur horticulture Farmer Producers Company Ltd – Kolar.

Processing technologies available

1. Tomato Instant products – CFTRI: <https://cftri.res.in/technologies/FVP/tips.pdf>
2. Tomato Juice – CFTRI: <https://cftri.res.in/technologies/FVP/top.pdf>
3. Training Manual on Processing of Tomato Products- IIFPT, Thanjavur
<http://niftem-t.ac.in/course-material-tomato.pdf>
4. Scholarly articles presented at 'XIII International Symposium on Processing Tomato' organized by International Society for Horticultural Science (ISHS) are published in a e-book format -
<https://www.ishs.org/ishs-book/1081>

Action plan

1. Focus on quality development and yield improvement in existing tomato varieties of India.
2. Import best agricultural practices and bring in global varieties germplasm to improvise local varieties through agricultural and horticultural universities.
3. Orientation and Facilitation must be prioritized to bridge the gap between research institutes, academia, industries and farmers to facilitate exports.
4. Local APEDA testing lab and pack house in tomato growing areas, helps growers to understand quality standards and thereby tap international markets.
5. Create awareness about the new products which have international market and transfer knowledge about required technology through CFTRI and IIFPT, so as to produce value added products.
6. Though India is the largest producer of tomato in Asian continent, we're not among the top ten exporting countries and hold no position in processed products like Tomato Juice and Ketchup. Hence there is a need to encourage first generation entrepreneurs and start-ups to establish themselves in processing sector to produce value added products and also to divert the surplus produce in turn avoiding the financial losses.
7. State and Central governments must sponsor financial schemes/ subsidies to aid capacity building in setting up of industries and encourage skill development programmes for the youth.

Opportunities in Tomato and related products

1. Though Tomato has a huge international market, only 20-25% of Indian produce meets the international standards and the rest gets into local market. The surplus produce can be converted into value added products such as Preserved and prepared tomato, juice, ketchup, sauces etc., There is a lot of demand in these sectors yet unexplored by Indian growers.
2. These value-added products not only provide employment to a larger group locally but also help the industries to establish themselves in exports.
3. Setting up of a dedicated testing lab, either stationary or mobile.
4. Dedicated pack house in North Karnataka is the need of the hour.
5. Processing industries for tomato pulp, juice, ketchup, sauce will easily fetch revenues from local as well as international market.

Responsibility Matrix

Sl.no.	Actions	Responsibility
1.	Research on best global varieties	Agricultural and Horticultural Universities, Karnataka
2.	Delegation of progressive farmers to Mexico, Spain and Netherlands	Horticulture department, Govt. of Karnataka
3.	Farmer Sensitization program on available opportunities	Agriculture and Horticulture departments, Govt. of Karnataka
4.	Inviting Exporters/entrepreneurs to Investors meet for contract farming and processing industries	Horticulture Department and DIC Districts
5.	Farmer database and aggregation of the produce	Horticulture department and related FPOs
6.	Processing technology and Value Addition Handholding	Horticulture department through CFTRI, Mysore and IIFPT, Thanjavur
7.	Export training, orientation and Market Intelligence	VTPC Karnataka
