Visvesvaraya Trade Promotion Centre (VTPC)

VTPC Building, Kasturba Road, Bengaluru-560001.

Preface

With a robust agro potential the Country has, the Government of India has launched the One District One Focus Product Scheme (ODOFP) for agriculture sector by the Ministry of Food Processing Industries. Among its primary objectives, the ODOFP initiative aims to enhance the value of the products which is eventually expected to boost employment and income levels of the farmers. The identified products across the country is available at <https://www.nfsm.gov.in/odopstatecropsreport.aspx>

Karnataka has identified its product mix with high demand and export potential across all the districts. The implementing agency for this initiative is the Karnataka State Agricultural Produce Processing and Export Corporation Limited (KAPPEC), the nodal agency in the State.

VTPC being the nodal agency for promotion of exports from the State has made an attempt to draw the action plan district wise, to capture the potential, present status and future prospects in domestic and international markets. Besides, detailed insights have been provided into the biological description of the product, their local, national and international varieties, export-import analysis, HS codes. For a holistic perspective for those concerned, each report also provides SPS standards, processing technologies available, export grading and packing specifications, and suggested pivotal roles and responsibilities among the government departments, boards, corporations and Universities.

Presenting the Action Plan/Report for Spices, a ODOFP product mapped to Chikkamagalur district of Karnataka, formulated by VTPC. I sincerely hope that this ready reckoner with first-hand information regarding the farming sector would help all those concerned, especially the FPOs and food processing entrepreneurs who have a desire to focus on exporting this product.

Introduction

A spice is a seed, fruit, root, bark, or other plant substance used to flavor or colour food. Spices are distinguished from herbs, which are the leaves, flowers, or stems of plants used for flavouring or as a garnish. Spices are sometimes used in medicine, religious rituals, cosmetics or perfume production. For example, vanilla is commonly used as an ingredient in fragrance manufacturing.

A spice may be available in several forms: fresh, whole dried, or pre-ground dried. Generally, spices are dried. Spices may be ground into powder for convenience. A whole dried spice has the longest shelf life, so it can be purchased and stored in larger amounts, making it cheaper on a per-serving basis. A fresh spice, such as ginger, is usually more flavorful than its dried form, but fresh spices are more expensive and have a much shorter shelf life. Some spices are not always available either fresh or whole, for example, turmeric, and often must be purchased in ground form. Small seeds, such as fennel and mustard seeds, are often used both whole and in powder form.

India contributes to 75% of global spice production. This is reflected culturally through their cuisine and historically, the spice trade developed throughout the Indian subcontinent, in East Asia and later in the Middle East. Europe's demand for spices later encouraged further exploration. India, also known as the home of spices, boasts a long history of trading with the ancient civilizations of Rome and China.

Today, Indian spices are the most sought-after globally, given their exquisite aroma, texture, taste and medicinal value. India has the largest domestic market for spices in the world. Traditionally, spices in India were only grown in small landholdings and with organic farming gaining prominence in recent times, commercial production of spices is now a booming industry. India is the world's largest producer, consumer and exporter of spices; the country produces about 75 of the 109 varieties listed by the International Organization for Standardization (ISO) and accounts for half of the global trading in spices.

Top 10 Most Popular Spices of the World

Sansho pepper

It is a Japanese spice characterized by its prized aromatic peppercorns, green in colour, arranged in floral patterns with a tangy, lemon-like flavour. It is a part of the famous seven Japanese spices and is closely related to the Sichuan pepper. The shrub is mostly grown in Japan, but also in China and North Korea. Traditionally, Sansho is used as a seasoning for fish and barbecue dishes or sprinkled over unagi grilled eel. It pairs extremely well with other spices such as sesame and ginger.

Sichuan pepper

Despite its name, Sichuan pepper is actually not a pepper, but a dried berry of a type of ash shrub that has a unique peppery and lemony aroma. It is characterized by its mouth-numbing properties, typical for numerous dishes from the Sichuan province of China. Sichuan pepper is also one of the five ingredients in the famous Chinese five-spice powder. The pepper is often ground or roasted and is commonly used to make an infused oil. It appears in numerous dishes such as kung pao chicken, bang bang chicken, and dan dan noodles.

Galangal

is a ginger-like root characterized by its pungent aroma and is widely used in Thai and Indonesian cuisine as a flavouring condiment or a spice. There are two varieties of galangal: greater galangal, which is lighter in colour and with a more subtle aroma, used mostly in Thai cooking, and lesser galangal, which is native to China. Galangal is hard and woody on the exterior, with a strong citrus scent on the inside. It gives a citrus note to numerous dishes, and it is an important ingredient in Thai curry pastes. Galangal can come in many forms such as fresh root, dried root, or ground into a fine powder.

Asafoetida

is a dried gum resin obtained from the taproot or rhizome of giant fennels, particularly *Ferula assafoetida*. The plants used to produce the spice are native to Iran and Afghanistan. The resinous juice starts to coagulate when exposed to air, and it has a strong and pungent odour that's similar to garlic. When the product sets to a solid mass, its colour varies from grey to black, but it's usually reddish to brown. This spice can be bought in several versions – tears, mass, paste, and powder. The tears are the purest, the mass is the most commonly available commercially, and the powdered version usually contains additions such as gum arabic, flour, and turmeric.

Amchur

is a spice and condiment originating from India, but it's also often used in Pakistan. It's made from unripe mangoes that have been sliced, dried in the sun, and then ground into a powder. The resulting powder has an intense aroma and tangy flavour. It adds a nice level of acidity to a vast number of vegetarian dishes, especially in Northern India, where it's used in the same way as lemon juice or vinegar are used in other parts of the world. It's recommended to add amchur to curries, dals, pickles, and chutneys due to its fruity and tangy flavours.

Ceylon cinnamon

is traditionally harvested from a tree that is native to Sri Lanka, formerly known as Ceylon, hence the botanical name of this health-beneficial spice. This cinnamon type is sweeter and more delicate than cinnamon cassia, the other main type of cinnamon. It has a beneficial effect on glucose metabolism and body weight and contains antioxidants called proanthocyanidins, which are also found in grapes and green tea. Unlike cinnamon cassia, Ceylon cinnamon does not contain coumarin – a natural plant chemical that is toxic to the kidneys and liver, and it might also be carcinogenic.

Azafrán de la Mancha

is a saffron grown in the autonomous community of Castilla-La Mancha. It is a spice produced by drying the stigmas of the *Crocus sativus*, L. plant. It has a floral and slightly bitter flavour and gives the dishes it is cooked in a bright golden yellow colour. Saffron is one of the most expensive spices in the world, with the price higher than that of gold, due to the laborious process of its harvesting. To preserve its subtle flavour, saffron grown in La Mancha is never sold powdered, but exclusively in the form of whole threads.

Saigon cinnamon

or Vietnamese cinnamon is a type of cinnamon coming from the *Cinnamomum loureiroi* tree. This type of cinnamon has the strongest flavour of them all, and it's the essential oils in the bark that give it its unique aroma and flavour. However, all the cassia varieties, such as this one, have higher levels of coumarin, a compound that can damage the liver if consumed in large amounts. Saigon cinnamon is often used in baked goods, curries, and pho.

Pimentón de la Vera

is the smoked paprika that has been produced exclusively in the La Vera valley, in the province of Cáceres since the 16th century when the Spanish conquistadors brought the peppers back from Mexico as a gift for the king and queen of Spain. This vibrant red spice is made by grinding dried peppers into a fragrant, spicy, smoky powder. In autumn, after harvesting, the finest peppers are hung on strings and are left to dry. They are then smoked using oak wood for two weeks, thus intensifying both their flavour and colour.

Saigon cinnamon

or Vietnamese cinnamon is a type of cinnamon coming from the *Cinnamomum loureiroi* tree. This type of cinnamon has the strongest flavour of them all, and it's the essential oils in the bark that give it its unique aroma and flavour. However, all the cassia varieties, such as this one, have higher levels of coumarin, a compound that can damage the liver if consumed in large amounts. Saigon cinnamon is often used in baked goods, curries, and pho.

Most used and cultivated Spices of India

India, contemporarily known as the home of spices, has a long trading history with ancient and medieval civilizations of the world. Ancient trade routes connected India with Europe, the Middle East and the rest of the world exists as a testimony to the world's preference for Indian spices since ancient times. Indian spices are known for their exquisite aroma and medicinal properties. Moreover, India has the world's largest domestic market for spices.

India's Top spices include pepper, cardamom, chilli, ginger, turmeric, coriander, cumin and others. Kerala is the topmost spice producing state in India and is also the largest producer of Pepper and Cardamom. The top importers of Indian spices in 2021 were: the USA, Germany, France, Canada, China, Saudi Arabia, and the United Kingdom.

India has remained the topmost world exporter of spices throughout, followed by Vietnam and China. Exports of spices and other value-added products during six months of FY21 stand at 7 lakh tonnes, valued at Rs 12,273.81 crore as against the shipment of 586,090 tonnes worth Rs 10,588.97 crore in the year-ago period. In terms of value, chilli, cumin, turmeric, coriander and ginger were the top five most-exported spices from India.

Chilli retained its position of being the largest exported spice from India with a shipment of 2,64,500 tonnes, fetching Rs 3,605 crore. Cumin followed next with a shipment of 1,53,000 tonnes valued at Rs 2167.70 crore, registering a 33% and 22% increase in quantitative and value terms respectively.

The spice which recorded the maximum growth in terms of quantity and value was small cardamom. It contributed to the overall exports during the period, rising 483% in value terms and 369% in quantity. During the period, 1,900 tonnes of small cardamom valued at Rs 329.50 crore were exported as against 405 tonnes valued at Rs 56.52 crore during the same period last year. Spice oils and oleoresins along with spices such as tamarind, saffron and others shared a significant part in the spices export basket from April-September 2020.

Turmeric registered a remarkable growth of 42% in quantity with a total shipment of 99,000 tonnes globally valued at Rs 858.10 crore, marking an increase of 35% in value terms as compared to the same period in the last fiscal. A total of 23,700 tonnes of ginger was exported all over the world, which was 86% more than last year.

The export of fenugreek, coriander and other seed spices such as mustard, aniseed, dill seed, etc, grew substantially contributing to the spices export basket in the period. Value-added spices such as curry powders and pastes remained popular in many countries resulting in their increased exports with a shipment of 19,500 tonnes valued at Rs 462.12 crore.

Milestones

- ✳ During FY19, India's chilly export stood at 468,500 tonnes, Cumin export at 180,300 tonnes, Turmeric export at 133,600 tonnes and Cardamom large export at 860 tonnes.
- ✳ In FY20 (till December 2019), ginger export showed the highest growth of 47% with 19,410 tonnes, followed by cardamom with 31% at 1,060 tonnes and cumin with 14% at 7,350 tonnes.
- ✳ In FY20, spices worth US\$ 3.62 billion were exported from India.
- ✳ The total spices export was US\$ 1.68 billion from April 2021 to August 2021 and for August 2021 it was US\$ 312.57 million.
- ✳ Top importers of Indian spices in FY21 were the US, UAE, UK, Hong Kong, Australia, and Canada.
- ✳ The total spices export in FY21 was US\$ 4.0 billion and for March 2021, it was US\$ 448.77 million.

Role of Spice Board

Spices Board is a statutory body constituted with effect from 26.02.1987 under the Spices Board Act, 1986 (10 of 1986) by merging the erstwhile Cardamom Board and the Spices Export Promotion Council under the administrative control of the Department of Commerce. Spices Board is responsible for the overall development of the cardamom industry and export promotion of 52 spices listed in the schedule of the Spices Board Act, 1986. The primary function of the Board includes the development of small and large cardamom, promotion, development, regulation of export of spices and control on the quality of spices for export. The Spices Board also undertakes research activities on cardamom (small & large) under Indian Cardamom Research Institute.

Primary Functions

- ✍ Research, Development and Regulation of domestic marketing of Small & Large Cardamom
- ✍ Post-harvest improvement of all spices
- ✍ Promotion of organic production, processing and certification of spices
- ✍ Development of spices in the Northeast
- ✍ Export promotion of all spices through support for:-
 - ✍ Technology upgradation.
 - ✍ Quality upgradation
 - ✍ Brand promotion
 - ✍ Research & product development

Other responsibilities related to the export promotion of spices

- ✍ Quality certification and control
- ✍ Registration of exporters
- ✍ Collection & documentation of trade information
- ✍ Provision of inputs to the Central Government on policy matters relating to the import & export of spices

Action Plan

- ☞ Spice board being the nodal agency has several plans, schemes, training programs and responsibilities to improve the quality and quantity of Spices.
- ☞ Export Oriented Production by Spice board:
http://www.indianspices.com/export_oriented_prod.html
- ☞ Though Karnataka leads in the export of dry spices, spice powders and oleoresins the volume when compared to other states is comparatively low. More cultivators can be encouraged to involve themselves in growing the spices in demand.
- ☞ Production yield of some spices is good but poor post-harvesting methods and grading is resulting in wastage and rejections. Adoption of Good Agricultural practices can combat this loss.

Responsibility Matrix

- ☞ Spice Board India, Ministry of Commerce & Industry, GOI has developed spices farmer's app to educate and facilitate production.
- ☞ The government of India has notified the formation of 11 Spice Development Agencies (SDAs) in the main Spice growing regions for the overall development of spices grown in the region.
- ☞ One such SDA/SPEDA is in Haveri for spices such as Pepper, Chilli, Cardamom, Ginger, Turmeric, Kokum, and Coriander.
- ☞ Spice Board has a database of cultivation practices for various spices like nutmeg, pepper, ginger, turmeric, cardamom, cinnamon, clove, vanilla, Chilli and coriander.
- ☞ The board has collaborated with international agencies in incorporating GAP thus enabling the farm produce to stay internationally competitive.
- ☞ They also have a separate wing meant for research and development that concentrates on quality, quantity, pre- and post-harvesting methods, Processing, grading and marketing of Spices.

No.	Actions	Responsibility
1.	Cultivator's database and aggregation of the produce	Spices Board India, Ministry of Commerce & Industry, GOI
2.	Inviting Exporters/entrepreneurs to Investors meet for contract farming and processing industries	Spices Board India, Ministry of Commerce & Industry, GOI
3.	Post-harvesting technologies, Grading and Processing of Spices	Spices Board India, Ministry of Commerce & Industry, GOI
4.	Processing technology and Value Addition Handholding	CFTRI and IIFPT, Thanjavur
5.	Export training, orientation, and Market Intelligence	Spices Board India and VTPC Karnataka
